AAQ91121-Q91130 are nested PCR primers used for the amplification and identification of beta-cardiac myosin heavy-chain RNA. They are used in a new non-invasive method for diagnosing hypertrophic cardiomyopathy (HC), the method involves detecting the presence or absence of specific HC-associated mutations in the beta-cardiac myosin heavy-chain obtained from a blood sample. The method may be used to diagnose familial or sporadic HC and the non-invasive method is particularly important when testing

The mutations associated with SHC/FHC are detected in the myosin gene isolated from blood, by detecting mis-matched areas in RNA-DNA hybrid double strands (RNA from the normal gene, DNA from the suspect determine life expectancy in affected individuals e.g. using a Kaplan-Meier curve for the classified type of FHC causing point mutation. Also included are an RNA probe comprising ribonucleotides arranged in a sequence which is complementary to at least a portion of beta-cardiac myosin heavy-chain DNA and a set of DNA oligonucleotide primers for amplifying beta-cardiac myosin heavy-chain DNA comprising at least two
asymptomatic individuals suspected of having the disease. The method has a broad applicability and may be used to detect mutations responsible for other genetically inheritable diseases e.g. cystic fibrosis, Gaucher's disease, haemophilia A and B, Duchenne's muscular dystrophy, sickle cell anaemia, Tay-Sachs disease and phenylketonuria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; ss; PCR; primer; beta cardiac myosin heavy chain; FHC; familial hypertrophic cardiomyopathy; SHC; Gaucher's disease; sporadic hypertrophic cardiomyopathy; life expectancy; haemophilia; buchenne's muscular dystrophy; sickle cell anaemia; Tay-Sachs disease; phenylketonuria; cystic fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting a presence or absence of a mutation associated with hypertrophic cardiomyopathy, useful for diagnosing cystic fibrosis or hemophilia, by detecting a mutation in an amplified product of a beta cardiac myosin heavy-chain DNA.

ö
oligonucleotides capable of amplifying beta-cardiac myosin heavy-chain DNA. The method is useful for detecting the presence or absence of a mutation associated with hypertrophic cardiomyopathy. This method is especially useful for diagnosing SHC and FHC, as well as for determining the estimated the life expectancy of a person with familial hypertrophic cardiomyopathy. In particular, the method is useful for determining an individual's genetic information, and diagnosing e.g. Gaucher's disease, haemophilia, Duchenne's muscular dystrophy, sickle cell anaemia, Tay-Sachs disease, phenylketonuria or cystic fibrosis. The present sequence is a nested PCR primer used to amplify a region of the beta cardiac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mutation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Detecting mutations associated with hypertrophic cardiomyopathy to diagnose hypertrophic cardiomyopathy, comprises amplifying beta-cardiac myosin heavy-chain DNA and detecting the mutation in the amplified product.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to detecting the presence or absence of a mutation associated with hypertrophic cardiomyopathy (familial or sporadic, FHC, SHC) for facilitating the diagnosis of hypertrophic cardiomyopathy, comprising amplifying beta-cardiac myosin heavy-chain DNA forming an amplified product, and detecting the presence or absence of a mutation associated with hypertrophic cardiomyopathy in the amplified product, thus, facilitating the diagnosis of hypertrophic cardiomyopathy. Also included are a set of DNA oligonuclectide primers for amplifying beta-cardiac myosin heavy-chain DNA comprising at least two oligonuclectides
                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human beta cardiac myosin heavy chain mutation detection primer B'.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SHC;

             The invention relates to aldehyde/ketone reductase 9 (AAB98900), nucleic acids encoding it (AAH46222), and a method for the recombinant production of the protein. The present invention additionally discloses an agonist of aldehyde/ketone reductase 9 for therapeutic use, and an antibody which specifically binds to aldehyde/ketone reductase 9. Aldehyde/ketone reductase of human immunodeficiency virus) infection, immune disorders and inflammatory conditions. The protein may also be used to screen for modulators of its activity or for peptide fingerprinting identification for polymucleotide can be used as a primer for nucleic acid amplification reactions or as a probe for hybridiation reactions, or in producing gene chips or microarrays. Sequences AAH46259. AAH46258 represent aldehyde/ketone reductase 9 probes used in an exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant phosphodiesterase (PDB) type IVC may be used to screen for inhibitors of PDB IVC. The inhibitors may be used in pharmaceutical for the treatment and prophylaxis of inflammatory diseases, especially inflamed lung associated with asthma. Multiple isoforms of PDB exist opening the possibility for individual inhibitors of each isoform. The distribution of PDB IV isoform mRNAs in different human rissues was analysed by northern blotting. Human multiple tissue northern blots were hybridised with isoform specific probes generated by PCR from the 3' non-translated region of each gene. Bither Hi-60 genomic DNA (probes A and C) or a CDNA library prepared from eosinophil enriched mRNA (probes B and D) were used as templates for the PCR reaction with two primers (AAT34642,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Phosphodiesterase, screening, identification, inhibitor, inhibition, PDE, treatment, prophylaxis, inflammatory disease, inflamed lung, asthma.

The invention relates to the novel human ADAM (A Disintegrin And Metalloprotease) -type metalloproteases MDTS4 (AAB73549) and MDTS5 (AAB73550). The metalloproteases can be used for the treatment of cancers and arthritis. The invention also relates to the genes encoding MDTS4 and MDTS5, vectors and host cells containing the MDTS4 or MDTS5 genes, the recombinant production of MDTS4 and MDTS5, and antibody specific for MDTS4 or MDTS5, and methods of screening for compounds which modulate the activity of MDTS4 and/or MDTS5. Sequences AAH20233- AAH20236 represent PCR primers used to isolate human MDTS5 cDNA (AAH20225)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; human leucine-rich repeat small intestine I; HLRRSII; asthma; proliferative disorder; gastrointestinal disorder; renal disorder; neural disorder; reproductive disorder; calcium regulation; apoptosis; immune system, anaemia, human immune deficiency virus; HIV; cancer; blood coagulation disorder; autoimmune disorder; allergic reaction; inflammatory condition; cardiovascular disorder; ischaemia; neurological disorder; infectious disease; cytokine production; PCR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protease and its preparation for use as an anti-cancer and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a primer used in the method of the invention for gene or CDNA cloning membrane-combined proteins and secreted proteins. A CDNA library is prepared using a vector where a multiple cloning site (MCS) is introduced 3' of a known secreted protein cDNA or 3' of a cDNA with the C-terminal deleted from all membrane penetrating parts of a membrane-combined protein. It is transfected into a eukarycyte and expressed as a fusion protein using a promoter suitable for each bio species, and the cell expressing the fused membrane protein on the cell membrane is concentrated and isolated using a specific antibody against the N-terminal protein. The plasmid is recovered and transfected to E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gene cloning of a protein - using a vector with a multiple cloning site introduced 3' of a known secreted protein cDNA.

The invention relates to muscle calcineurin interacting proteins (MCIPs) and nucleic acid molecules encoding such proteins. MCIPs form a physical complex with the catalytic subunit of calcineurin and increased levels of MCIPs correspond to a reduced ability of calcineurin and increased levels of transcription of certain target genes. The invention also relates to methods for identifying modulators of MCIP binding, expression or phosphorylation. Inhibitors or promoters of MCIP binding to calcineurin may be used for treating cardiac hypertrophy and heart failure. Antibodies to MCIP can be used in characterising the MCIP content of healthy and diseased tissues and subsequently for determining the presence or absence of cardiomyopathy or as predictor of heart disease. The present sequence is a PCR primer used to isolate HA-tagged human MCIPI splice variant 4
                                                                                                                                                                                                                                                                                           Screening for modulators of muscle calcineurin interacting protein (MCIP) binding, expression or phosphorylation, useful for treating cardiac hypertrophy or heart failure, comprises mixing MCIP, calcineurin and a test compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /*tag= b

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ð
                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated nucleic acid molecules (I) encoding human leucine-rich repeat small intestine I (HLRRSII) polypeptides. The nucleic acid molecules and polypeptides are useful for preventing.

CC treating and ameliorating medical conditions, such as proliferative, created to abstrant calcium regulation or apoptosis modulation, either directly or indirectly. They are also useful for treating, preventing and/or diagnosing diseases, disorders and/or conditions of: immune system carectly or indirectly. They are also useful for treating, preventing and/or diagnosing diseases, disorders and/or conditions of: immune system conditions of inminibiting the proliferation, differentiation, or mobilisation of immune cells, haematopoietic cells e.g. thrombocytopenia, anemnia, immune deficiency syndromes, e.g. human immune deficiency virus (HIV) infection, HTW-BLV infection; blood coaqulation disorders, e.g. Addison's disease, wasthenia gravis; asthma or allergic reactions; inflammatory conditions, cardiovascular disorders, e.g. arrhythmia, myocardial ischaemias, aneurological disorders, e.g. arrhythmia, myocardial ischaemias, aneurological disorders, e.g. measles, mumps, pneumonia, or viral, bacterial, and fungal infections. The HRRSII polypeptides are useful for and fungal infections. The HRRSII polypeptides are useful such an an and an anomal such and such are allerged.

Also described are: inhibiting the expression of ornithine decarboxylase 1 in cells or tissues; screening for a contituine decarboxylase 1; identifying a disease state; a kit or assay device comprising the compound; and treating an animal having a disease or condition associated with ornithine decarboxylase 1. The oligonucleotide compound is useful for preparing a composition for The oligonucleotide compound is useful for preparing a composition for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a new compound, having a sequence comprising 8-80 bp targeted to a nucleic acid encoding ornithine decarboxylase 1, specificially hybridises with the nucleic acid encoding ornithine decarboxylase 1 comprising 203-bp sequence and inhibits expression of ornithine decarboxylase 1. Also described are: inhibiting the expression of ornithine decarboxylase 1 in cells or tissues; screening for a modulator of ornithine decarboxylase 1; identifying a disease state; a kit or assay device comprising the compound, and treating an animal having a disease or condition associated with ornithine decarboxylase 1. The oligonucleotide compound is useful for preparing a composition for treating hyperproliferative disorder, e.g. cancer. This sequence represents an ornithine decarboxylase 1 antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /note= "OTHER= Phosphorothioate backbone. All cytidines are 5-methylcytidines"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cytostatic; gene therapy, ornithine decarboxylase 1;
ornithine decarboxylase 1 associated disorder;
hyperproliferative disorder; cancer; human; antisense oligonucleotide;

diagnosis and method for using the same which provides with a quick diagnosis for 20 species of bacterial pathogens. The invention is useful for diagnosis of bacterial meningitis pathogens or can be conjugated to substrate (e.g., blochips) and serve as probes. The present sequence is an oligonucleotide used to diagnose Staphylococcus saprophyticus pathogen. This sequence is used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a nuleic acid kit for bacterial pathogen
              This sequence is a fragment of the CRCA-1 (colorectal cancer associated) transcript of the invention. The CRCA-1 transcript is a specific marker for colorectal cancer cells and detecting it is used to identify/confirm cells as colorectal cancer cells and to examine the extent of which they have migrated, especially for diagnosis, staging and post-operative monitoring, also for screening subjects at risk. The CRCA-1 DNA is used to express the corresponding expression products and its fragments are useful as oligonucleotide probes, primers and antisense agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid kit for diagnosis of bacterial pathogens that cause meningitis comprises nucleic acid sequences designed for 20 bacterial pathogens e.g., Staphylococcus aureus, S.epidermidis, Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Oligo 3-2 used to diagnose Staphylococcus saprophyticus pathogen.

                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                 The present invention relates to a method (M1) for obtaining a bifunctional complex. (M1) comprises a display molecule part and a coding part, where a nascent bifunctional complex comprising a chemical reaction site and a priming site for enzymatic addition of a tag is reacted at the chemical reaction is the with reactent(s), and provided with respective tag(s) identifying the reactant(s) at the priming site using one or more enzymes. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                          at
                                                                                                                                                                                    Obtaining bifunctional complex with display molecule and coding part, where bifunctional complex with priming site for adding tag is reacted a reaction site with reactants and provided with tag identifying reactant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CRCA-1 transcript, a specific marker for colorectal cancer cells - used for in vitro diagnosis, staging and monitoring colorectal cancer and

This invention relates to the novel human protein 46.53, containing a bromo structure, and the CDNA sequence encoding it. The invention may be useful in the treatment of diseases such as cancer and HIV infection. The present sequence is that of oligonucleocide probe I related to the human 46.53 protein of the invention and used in example 7 of the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New complexes of protein-protein interactions in Helicobacter pylori, useful for identifying modulating compounds for treating or preventing
                                                                                                                                                                                Polypeptide-human protein-46.53 containing bromo structure domain and polynucleotide for coding it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein-protein interaction; ulcer; selected interacting domain; SID;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to the novel human protein 46.53, containing a bromo structure, and the cDNA sequence encoding it. The invention may be useful in the treatment of diseases such as cancer and HIV infection. The present sequence is that of oligonucleotide probe 2 related to the human 46.53 protein of the invention and used in example 7 of the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Polypeptide-human protein-46.53 containing bromo structure domain and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transments or their expression products that allows typing of Helicobacter fragments or their expression products that allows typing of Helicobacter pylori strains. The method comprises preparing genomic DNA components of from clinical isolates and strains of H. Pylori that can be distinguished, particularly from their geographical origin or their particular associated pathology. Subsequently a set of non-ubiquitous particular associated pathology. Subsequently a set of non-ubiquitous particular associated pathology. Subsequently a set of non-ubiquitous present in the first stage and a composition may be prepared ontaining the in the first stage and a composition may be prepared containing the identified ORFs, or fragments, their expression products or antibodies against these expression products. The method of the invention may be used to provide unequivocal differentiation between clinical isolates of H. Pylori according to their geographical origin and isolates of H. Pylori infection is particularly associated with gastric and duodenal ulcers or inflammation, as well as cancer of the stomach or gastric system. The current sequence is that of a DNA/RNA hybrid PCR primer of the invention which was used to amplify H. pylori
                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Preparing set of DNA fragments or expression products, useful for typing strains of Helicobacter pylori, by selecting non-ubiquitous open reading frames from genomic DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of human acid phosphatase family protein 11. The sequences can be used in the treatment of cancer, haemopathy, HIV infection, immune diseases and phlogosis. The present sequence is a PCR primer for the coding sequence of the invention

PCR primer for Mash1 gene.

PCR primer; neuroectoderm cell; cell production; Parkinson's disease; early primitive ectoderm-like cell; EPL cell; cell therapy; transgenic animal; gene therapy; neuronal disease; Huntington's disease; lysosomal storage disease; multiple sclerosis; memory disorder; behavioural disorder; Alzheimer's disease; organ transplant; spinal cord disorder; Mashl; ss.

```
This invention relates to an isolated nucleic acid molecule comprising a polynucleotide encoding a human G-protein receptor, including HGRBMY28, CC HGRBMY29, HGRBMY29, DOTYPEPTIGES. THE HGRBMY28 or HGRBMY29 polypeptides and nucleic acids are useful for treating.

CHGRBMY29 polypeptides and nucleic acids are useful for treating, preventing or ameliorating a medical condition, e.g. an immune disorder, an inflammatory disorder in which G-protein coupled receptors are either directly or indirectly associated with the disorder, a gastrointestinal disorder, a neural disorder at pulmonary cidisorder, a proliferative disorder, a cancre, a disorder related to aberrant p27 regulation, a disorder related to aberrant FBNI regulation, a disorder related to aberrant bMA repair regulation, a disorder related to aberrant call cycle regulation, a disorder related to aberrant condess, a male or female reproductive disorder related to aberrant condess, a male or female reproductive disorder related to aberrant condess, a male or female reproductive disorder a proliferative disorder, a cardiovascular disorder, a placental disorder, a fillicting the colon, cervix, lung, squamous cells or tissues, a renal disorder, a cardiovascular disorder, a placental disorder, and a disorder of the testes, heart or lymph nodes. The isolated polymuclectides of the invention may be used to treat disorders by gene therapy. This

This sequence represents a PCR primer for the Mashl gene, used within the scope of the invention. The invention relates to a method for producing cope of the invention. The invention relates to a method for producing conceed early primitive ectoderm—like (BFD) cells and a neural-inducing conditioned primitive ectoderm—like (BFD) cells and a neural-inducing conditioned confident (CM) or extract of it, and (b) contacting the BFD cells with the CM or extract for a time sufficient to generate controlled cifferentiated for a time sufficient to generate controlled by the cuseful in human, or animal cells or partially differentiated progeny are confidentiated progeny and evaluation of biological molecules that induce differentiated progeny and evaluation of biological molecules that direct differentiated cells. It is also useful for producing differentiated cells. It is also useful for producing differentiated cells from neural ecoderm cells. The method can consequence confident maintaining neuroectoderm cells in vitro in homogeneous cell populations. It can also be used for producing the result of neuroectoderm cells in vitro in the result of neuroectoderm cells. The cells can be used in the result of neuroectoderm cells. The cells can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           treatment of neuronal diseases, including Parkinson's disease,
Huntington's disease, lysosomal storage diseases, multiple sclerosis,
memory and behavioural disorders, and Alzheimer's disease. The method can
also be used for preparation of tissue or organs for transplant. Neural
crest cells produced by the method are useful for the treatment of spinal
cord disorders and Schwann cells produced by the method are used for the

The compound is useful for preparing a composition for treating diabetes, cancer, ischaemia or reperfusion injury, or angiogenic, immunological, cardiovascular or neurological disorder. This sequence represents an antisense oligonucleotide that can be used to modulate expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                comprising 8-30 bp targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), that specifically hybridises with the nucleic acid ESM-1 and inhibits its expression. Also described are: a composition; inhibiting the expression of ESM-1 in cells or tissues; and treating an animal having a disease or condition associated with ESM-1.
                                                                                                                                                         cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; gene therapy; endothelial specific molecule-1; ESM-1; ESM-1 related disorder; diabetes; cancer; ischaemia; reperfusion injury; angiogenic disorder; immunological disorder; cardiovascular disorder; neurological disorder; se.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense compound, having a sequence targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), useful for preparing a composition for treating e.g., diabetes, cancer or cardiovascular
                                                                                                                                                                                                                                                                                                                                             /mod_base= OTHER

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and
                                                                                                                                                                                                                                                                                            cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; gene therapy; endothelial specific molecule-1; ESM-1; ESM-1; BSM-1 alated disorder; diabetes; cancer; ischaemia; reperfusion injury; angiogenic disorder; immunological disorder; cardiovascular disorder; neurological disorder; antisense technology; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           comprising 8-30 bp targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), that specifically hybridises with the nucleic acid ESM-1 and inhibits its expression. Also described are: a composition, inhibiting the expression of ESM-1 in cells or tissues; and treating an animal having a disease or condition associated with ESM-1. The compound is useful for preparing a composition for treating diabetes cancer, ischaemia or reperfusion injury, or anglogenic, immunological, cardiovascular or neurological disorder. This sequence represents an antisense oligonucleotide that can be used to modulate expression of endothelial specific molecule-1 (ESM-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "OTHER= phosphorothioate backbone. All cytidine residues are 5-methylcytidines"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human clathrin light chain 13.64 (see ABB96794). The protein and its coding sequence can be used for treating various diseases, such as malignant tumours, haemopathy, HIV infection, immunological diseases and various inflammations. The present sequence is a PCR primer, which was used in an example from the invention
                                                                                                                                                                                                                                                                                                                                                                                                            New human clathrin light chain 13.64 polypeptide for treating malignant tumors, hemopathy, human immunodeficiency virus infection, immunological diseases and various inflammations.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a system for detecting gene expression, which comprises one or two isolated DNA molecules that detect expression of a gene, where the gene corresponds to any of 8143 oligonucleotides (ABZ00010-ABZ003152) each having 50 base pairs (bp). The system is useful for leukocyte expression profiling. It is particularly useful for diagnosing a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis or cytomegalovirus infection
17, leukocyte, gene expression profiling, allograft rejection; atherosclerosis; congestive heart failure, systemic lupus erythematosus; rheumatoid arthritis; osteoarthritis; cytomegalovirus; infection; probe;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human DNA probe used to monitor expression of diagnostic genes SeqID990.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                human, ss; autoimmune; chronic inflammatory disease; SLE; systemic lupus erythematosis; rheumatoid arthritis; cholecystitis; Sjogren's disease; CREST syndrome; scleroderma; ankylosing spondylitis; ulcerative colitis; primary sclerosing cholangitis; appendicitis; diverticulitis; primary biliary sclerosis; probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New system for leukocyte expression profiling, diagnosing a disease, or monitoring (the rate of) progression of a disease, e.g. atherosclerosis or congestive heart failure, comprises diagnostic oligonucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Phillips J;

cutoimmune and dronic inflammatory diseases. Specifically, it refers to the identification of genes that have a clinical utility as diagnostic tools for the management of, in particular, patients with systemic lupus erythematosis (SLB) or rheumatoid arthritis (RA). Accordingly, the present invention describes a method for determining the levels of multiple differentially expressed genes of a patient, in a concerted manner, in order to achieve an improved diagnostic assay with sensitivity and specificity for the disease in question. As such, these genes are useful for the diagnosis of various other inflammatory disorders including cholecystitis, slogren's disease, CREST syndrome, sclerosing cholangitis, appendicitis, diverticulitis, and primary sclerosing cholangitis, appendicitis, diverticulitis, and primary biliary sclerosis. This oligonucleotide is a human DNA probe used to monitor the expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, wenchanglant rejection or mechanical organ replacement rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a 50 mer oligonuclectide marker for diagnosis and monitoring of allograft
                                                                                                     Diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New array of nucleic acid probes, useful for in situ hybridization, in Southern, Northern or dot-blot hybridization to identify or detect the sequence or specific mutations of any gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EST; ss; probe; expressed sequence tag; microarray; gene expression;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADH27316
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                               The invention discloses a microarray comprising a plurality of nucleic acid probes including one of 2,018,500 fully defined sequences, or its perfect match, perfect mismatch, antisense match or antisense mismatch. Also disclosed is a method of gene expression analysis. The array is used in analysis of genetic variation or in hybridisation of tag-labelled compounds. The nucleic acid probes are specifically designed for analysis of at least one target sequence. The method of analysis comprises bybridising at least one or more nucleic acid probes and detecting the hybridisation. The nucleic acid probes are attached to a solid support. The analysis comprises monitoring gene expression levels, identifying biallelic markers or polymorphisms, or family members of a gene and a cross-species comparison. Each of the nucleic acids further comprises a tag sequence. The array of nucleic acid probes is useful in in situ hybridisation, in Southern, Northern or dot-blot hybridisation to identify or detect the sequence or specific mutations of any gene, in mapping the 5' termini of mRNA melecules by primer extensions or in screening segments of DNA that have been containing segments of DNA that have been contained and previously sequenced. The sequence presented is one of the nucleic acid probes incorporated in the microarray. Note: The sequence date for this patent can also be obtained in electronic format directly from USPTO at sequence. Thull
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New cotton plant event PV-GHBK04 (757) nucleic acid sequences, useful for detecting DNA from the cotton plant event 757 in a sample for determining whether the progeny of a sexual cross contain a transgene of interest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The method comprises: (a) placing 2 structures from structures generated for 2 RNA sequences from 2 organisms into a parent group; (b) generating an offspring group from the parent group; (c) determining fitness of the parent and offspring groups; (d) selecting at least one group from the parent and offspring groups; (d) selecting at least one group from the parent and offspring groups with the highest fitness, where the conserved structure in the RNA is present within the at least one group. The method is useful for detecting a conserved structure in an RNA sequence. The present sequence is used in
plant event 757 in a sample. The methods are useful for determining whether the progeny of a sexual cross contain a transgene of interest. The present sequence represents a PCR primer that may be used to detect DNA derived from the cotton event 757 in a sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detecting a conserved structures in an RNA sequence by generating an offspring group from the parent group and selecting at least one group from the parent and offspring groups with the highest fitness.
                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detection; conserved structure; RNA structural element; fitness; ss.

The present invention describes a method for detecting a conserved structure in an RNA sequence. The method comprises: (a) placing 2 structures in an RNA sequences from 2 RNA sequences from 2 organisms into a parent group; (b) generating an offspring group from the parent comparing the fitness of the parent and offspring groups; (d) selecting at least one group from the parent and offspring groups; and (e) selecting at least one group from the parent and offspring groups; into the highest fitness, where the conserved structure in the RNA is present the highest faction group. The method is useful for detecting a conserved structure in an RNA sequence. The present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for detecting a conserved structures in an RNA sequence. The method comprises: (a) placing 2 structures from structures generated for 2 RNA sequences from 2 organisms into a parent group; (b) generating an offspring group from the parent group; (c) determining fitness of the parent and offspring groups; (d) selecting at least one group from the parent and offspring groups; (d) selecting at least one group from the parent and offspring groups; ind (e) the highest fitness, where the conserved structure in the RNA is present within the at least one group. The method is useful for detecting a conserved structure in an RNA sequence. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
